

## **Process Engineer**

*Full Time for 3 months with potential extension*

### **Company Description:**

SAGES is a pioneering bio-chemical dye company based in London, United Kingdom, creating vibrant dyes from food waste. Their dye range includes over 40 colors, with high color strength and color fastness achieved entirely from food waste. These dyes are designed to lower CO2 emissions and negate current reliance on petrochemical derived synthetic dyes.

### **Role Description:**

SAGES are building a pilot scale manufacturing facility and require the assistance of a Process Engineer. This is a full time role starting initially starting with a 3 month contract which will be extended based on ongoing needs. The Process Engineer will be responsible for process design, process control, analytical skills, process engineering, and chemical engineering. This role will be based in the London Area.

The ideal candidate will have experience working in a related field such as food and beverage processing, brewing, paints inks and coating manufacture, water processing or chemical manufacture.

We are looking for someone who is enthusiastic, willing to creatively problem solve and is excited to be involved in the start-up journey!

### **Qualifications:**

- Process Design, Process Control, and Process Engineering skills
- Analytical Skills and Chemical Engineering expertise
- Experience in process optimization and improvement
- Knowledge of sustainability practices in manufacturing processes
- Strong problem-solving and decision-making abilities
- Bachelor's degree in Engineering or related field
- Excellent communication and teamwork skills
- Experience in the fashion or textile industry is a plus
